

# CodeLabs - Scientific Machine Learning

---

Mark Asch - IMU/VLP/CSU

2023

# Program

1. Function approximation
2. Function learning
3. Parameter identification in a (P)DE
4. PINN for harmonic oscillator
5. DeepXDE tutorial and examples

# FUNCTIONS

# Approximating and Learning Functions

- Learn a sine function

⇒ [02Examples/PINN/pytorch\\_NN\\_fct\\_approx.ipynb](#)

- Learn a stepwise function

⇒ [02Examples/PINN/pytorch\\_NN\\_single\\_layer.ipynb](#)

# PHYSICS CONSTRAINED LEARNING

# Parameter Identification

- Constant parameter identification inverse problem for a (P)DE

⇒ [02Examples/PINN/PCL\\_1D\\_param\\_const.ipynb](#)

# PHYSICS INSPIRED NEURAL NETWORKS

# PINN for ODE

- PINN for harmonic oscillator

⇒ [02Examples/PINN/PINN\\_harmonic.ipynb](#)

# PINN for PDEs with DeepXDE

- **DeepXDE** is a library for scientific machine learning and physics-informed learning. DeepXDE includes the following approaches:
  - ⇒ physics-informed neural network (PINN)
  - ⇒ (physics-informed) deep operator network (DeepONet)
  - ⇒ multifidelity neural network (MFNN)
- In this course, we will concentrate on PINN

- Installation is described on this [page](#) - we will be using the PyTorch backend, which we have already installed...
- ⇒ We recommend to create a new conda environment for DeepXDE and to install it, together with all its dependencies in this env

```
conda create -n deepxde23 python=3
```

```
conda activate deepxde23
```

```
conda install jupyter numpy matplotlib scipy
```

```
conda install scikit-learn scikit-optimize
```

```
conda install pytorch torchvision -c pytorch
```

```
conda install -c conda-forge deepxde
```
